

# AccroLube® Grease

**AccroLube High Temperature Polyurea Grease with PTFE** creates a boundary lubrication film that reduces wear between metal surfaces and protects against corrosion. AccroLube Grease deposits a fine protective and lubricating film on the metal that will continue to function even after the grease has extruded away. Suspended micro particles of PTFE ensure continued performance on equipment operating at extreme loads and high temperatures.

*Available in 5cc pillow pack, 1.5oz tube, 14.5oz cartridge, 1lb can, 5lb can, 35lb pail, 120lb Keg, and 400lb drum.*

**AccroLube Food Grade Grease** is H1 approved and can be used in food processing environments where there is a possibility of incidental food contact. It is a premium, high performance aluminum complex grease formulated with synthetic base oil for various applications in the food industry. The synthetic fluid used in the formulation is designed to extend service life and offer a wide operating temperature for today's food grade applications compared to typical mineral oil-based greases. **AccroLube Food Grade Grease** is a multi-service, non-melting, waterproof grease fortified with PTFE. It is designed specifically to lubricate, seal out water, and resist chemical attack under the most demanding conditions. **AccroLube Food Grade Grease**, with its excellent film strength and extreme pressure qualities, forms a tough durable film of lubrication that prevents metal-to-metal contact.

*Available in 14 oz cartridge, 1lb can, 7lb can, 35lb pail.*
