

Automatic Application Systems: NEAR DRY TUBE & MANDREL LUBRICATION

How it works:

Metalloid Tube Bending Systems control lubricant by delivering the exact amount of lube to the mandrel, and the bend die assembly and/or the tube if necessary. The key to the system is automatically delivering the correct amount of lube through the mandrel rod. The Metalloid system eliminates excess lubricant associated with typical mandrel or manual application, so very little remains on finished parts. The system can reduce lubricant consumption in excess of 50 percent, with the added benefit that machines, floors and operators stay clean!

Metalloid manufactures a variety of microlubricants that are very successful for tube bending when coupled with this lubrication system. We have all the experience necessary to help you improve your tube bending operations.
